

# Multi Angle Swivel Kit

Kit SKU: GWF513ASKB

Create your angle. Shape your fence line.

Greenwood Fence posts accommodate standard 90° corners using their built-in slots. For other changes in direction, the Multi-Angle Swivel Kit adds an adjustable receiver channel with up to 180° of rotation. Use kits at successive posts to follow a series of angles along your fence line.

Angled fence application and installed swivel connection detail

## Two components working together

**Fixed pivot base** The circular component attaches to the fence post and provides the pivot for the receiver channel.

**Rotating receiver channel** The second component fits over the pivot base and rotates through a range of up to 180°. Once aligned, it is secured to the base with the screws provided and functions as a post slot for the continuing fence section.

ADJUST TO THE LAYOUT • SECURE THE ANGLE • CONTINUE THE RUN

# How the swivel kit works

The connection is adjusted during installation and secured in a fixed position before the fence run continues.

## Installation sequence

- 1 Attach the pivot base**  
Fit the circular pivot base into the fence post slot and secure it to the post.
- 2 Fit the receiver channel**  
Slide the rotating receiver channel over the pivot base.
- 3 Align the next fence section**  
Rotate the receiver channel to suit the required fence direction, within its range of up to 180°.
- 4 Secure and continue the run**  
Secure the receiver channel to the pivot base with the screws provided. Use the channel as the post slot for the next fence section.

## Where it is used

Use the kit where a fence run needs to change direction at a line post, including angled boundaries, irregular property lines, and layouts requiring a connection beyond the post's fixed slot directions.

## Common questions

### Can the fence follow an angled property line?

Yes. The kit lets the next fence section align with an angled layout by rotating the receiver channel before securing it.

### How much adjustment does the kit provide?

The receiver channel rotates through a range of up to 180° around the fixed pivot base.

### Does the swivel move after installation?

The receiver channel is secured to the pivot base with the screws provided once the desired angle is established, creating a fixed connection.

### Does the kit replace the fence post?

No. It is a two-piece aluminum attachment that adds an adjustable receiver channel to a fence post.
